

Navigate Your World, But Don't Fall Off the Edge

Mastering Elements of Personal Security

Personal security is a condition that occurs when individuals take adequate precautions to detect, delay, or deter potential crime, resulting in their freedom from, or their resilience to, harm caused by others.

Why?

It takes the average person a minimum of two seconds to realize and react to a situation where something bad is about to happen to them. While two seconds doesn't sound like a long time, it's long enough for a criminal to get the jump on you, and it leaves you vulnerable to personal harm. Criminals know this and they capitalize on that element of surprise. By heightening your awareness and planning ahead, you can take that advantage back and increase personal security for yourself and your loved ones.

What?

Our custom designed course covers some of the most common oversights or mistakes people make when it comes to personal security. You will learn how to hone your situational awareness (the ability to perceive what is going on around you) and how to use the OODA Loop (the process of observing, orienting, deciding, and acting) to give you a tactile advantage in a dangerous situation.

Who?

This course is designed for anyone who works on-site, in the field, from a home office, or just wants to generally improve the condition of their personal security. The concepts presented in this course apply to the home environment as much as your work environment. The things you learn here could keep you, your family, and your co-workers safe should the unthinkable occur.

IMReady™ Personal Security training is specifically developed to empower employees with the knowledge and tactics required to decrease the potential for workplace violence related incidents. Our instructors place emphasis on the development of situational awareness and the concepts of the OODA Loop to give your employees an advantage in a potentially dangerous situation.
